

Teamwork Contract

Team Name:	Group 18 - Credit Card Fraud Detection	TIPS FOR EFFECTIVE TEAMWORK • Complete your Teamwork Contract at your first team meeting. • Set agendas for meetings. • Ensure clarity on your action items, timelines, deliverables, and project milestones. • Check in with your team members. • Ask questions, especially if something is unclear to you. Seek to understand. • Ask for input from your colleagues and build on each other's ideas. • Structure team meetings so that everyone has a chance to speak and participate.
Team Number:	18	
Course and Section Number:	CSCI-3052U - 46506 (Machine Learning I)	
☐ Has your team completed the Team Skills Audit form? (See below.) <i>Status: COMPLETED</i>		
SECTION A – EXPECTATIONS, BEHAVIOURS, GROUND RULES		

Have an open, direct conversation about the kinds of expectations and behaviours that will help your team work effectively. Use the questions below as a guide to start your team discussion. To ensure a productive discussion, think about these questions in advance. You might want to practice conversation management techniques or structure your conversation using Post-It notes / a shared document to allow team members to write down their opinions.

- What values are important to you as a team?
- What grade are you aiming for as a team? How will you help each other achieve this?
- How will you communicate and how often? How responsive must team members be? What communication platform will you use?
- How will you meet as a team (in person, virtually)? How often will you schedule meetings?
- How will you manage file or data sharing? Which platform will you use?
- If a group member can't meet a deadline due to unforeseen circumstances, what should they do?
- What do you consider to be "late" for meetings or for internal draft submission deadlines?
- What will you do if you are unhappy with the quality of work produced by the team or by an individual team member?
- How will you handle conflict or confrontation? Will you deal with it in the moment, or do you need space and time to reflect? If team conflict or disagreement arises, how will you address it? (Consider your personal communication style and preferences and share with your group.)
- How will you provide constructive feedback to each other? (Consider what you need from your teammates when it comes to feedback and share with your team.)

Questions adapted from Barkley et al. (2014)

Use this discussion and the column on the right below to create your team's ground rules.

- Carefully read and review content from all team members to ensure familiarity with the full assignment submission. - Meet deadlines the team has agreed on. - Provide 48-hour notice for any changes to group meetings.	Communication and sharing information: Use the WhatsApp group for day-to-day updates, GitHub for code/version control, and Google Meet for virtual discussions. Important decisions will be summarized in the group chat. Team members should respond within 24 hours when possible. Meetings and deadlines: Meet weekly or before each project milestone using Google Meet, with occasional in-person meetings when helpful. Notify the team as early as possible if unavailable. Internal work should be ready about 48 hours before the course deadline for team review. Work distribution and quality: Divide work fairly and make responsibilities clear. Each member completes assigned tasks on time, and all members review the integrated notebook/report. Code should run reproducibly and results should be checked before submission. Feedback: Give specific, respectful, and constructive feedback focused on the work. Ask questions when something is unclear and allow time for revisions. Miscommunications or incomplete work: Raise concerns promptly in the group chat or meeting, clarify ownership and deadlines, and redistribute work if needed. If an issue cannot be resolved as a team, contact the instructor/TA for guidance. Other: Aim to meet all rubric requirements and produce a high-quality submission. Follow academic integrity rules, cite external sources, and discuss major changes before merging them into the shared project.
SECTION B – PROJECT PLAN	

When you decide on team roles, consider rotating roles for each task or stage of the project. This gives all team members a chance to develop a well-rounded skill set. Common roles might include facilitator, editor, data manager, coordinator, but you can decide on your own roles based on group strengths and the goals of the assignment.

Team Member	Principal Roles
Mansi Kandoi	Data & Repository Coordinator - dataset setup, preprocessing/EDA coordination, GitHub organization, and integration of the final notebook.
Sadhna Drall	Logistic Regression & Evaluation Lead - baseline model, evaluation metrics, model interpretation, and related documentation.
Aryan Patel	Random Forest & Visualization/Documentation Lead - Random Forest model, tuning/comparison, visualizations, and report/presentation support.

Notes on Team Roles (E.g., Will you rotate roles? Define any roles that are unclear above.)

These are principal roles, not exclusive roles. All three members will review the dataset, code, model results, report, and presentation. Meeting facilitator/editor duties may rotate by milestone so everyone contributes to planning, technical work, and final quality control.

TASK ASSIGNMENT		Final Deliverable Due: December 7, 2026	
Task	Steps Involved in Task	Task Deadline	Team Meeting Date
Project setup & dataset acquisition	Confirm the Kaggle Fraud Dataset, define the target/features, document the dataset, and organize the GitHub repository.	Sep. 28, 2026	Sep. 26, 2026
Data cleaning & exploratory analysis	Check missing/duplicate values, examine class imbalance and feature distributions, preprocess the data, and create initial visualizations.	Oct. 19, 2026	Oct. 17, 2026
Logistic Regression baseline	Prepare train/test data, scale features where appropriate, train Logistic Regression, and evaluate precision, recall, F1, ROC-AUC, and confusion matrix.	Oct. 26, 2026	Oct. 24, 2026
Random Forest model	Train Random Forest, tune key parameters, inspect feature importance, and evaluate using the same fraud-detection metrics.	Nov. 16, 2026	Nov. 14, 2026

Model comparison & interpretation	Compare Logistic Regression and Random Forest, analyze errors and fraud-detection trade-offs, and finalize figures/tables and conclusions.	Nov. 30, 2026	Nov. 28, 2026
Final integration & submission	Clean the notebook, verify reproducibility, finalize report/slides, update README, review citations, and complete a final team quality check.	Dec. 7, 2026	Dec. 5, 2026

Notes on Project Management and Task / Work Plan:

Project: Option 5 - Credit Card Fraud Detection | Dataset: Kaggle Fraud Dataset | Models: Logistic Regression and Random Forest.

- GitHub repository: <https://github.com/kandoimansi/Machine-Learning-Project-Group-18>. GitHub will be the source of truth for code and version history. Members will use clear commit messages, pull the latest changes before editing, and discuss major changes before integration.
- WhatsApp will be used for quick communication and status updates; Google Meet will be used for virtual meetings; the team may also meet in person. If a member expects a delay, they will notify the group early, explain what is blocked, and agree on a revised plan.
- Before each milestone, all members will review the notebook/results so the submission is consistent and reproducible.

SECTION C – SIGN OFF

By writing your name and student number below, each of you indicates that you agree and commit to the plan developed and ground rules contained in this Team Contract.

If you do not agree with the terms above, do not sign the contract. Instead, bring up your concerns with your team. You can also contact a Teamwork Mentor by sending an email through the course slack. Teamwork Mentors can help you and your team develop ground rules and a plan of action you can all agree to.
